fcmocanu

computational electrochemistry • molecular dynamics • phase-change memory materials • thermal transport • machine-learned interatomic potentials • quantum-dots • non-equilibrium and glassy dynamics

EDUCATION

2015–2018 **PhD Chemistry**, *Department of Chemistry*, University of Cambridge, *2018 Outstanding Thesis Prize Winner*

2014–2015 **MPhil Scientific Computing**, *Centre for Doctoral Training in Computational Methods for Materials Science*, University of Cambridge, *Distinction*

2010–2014 **MSci Natural Sciences**, *Department of Chemistry*, University of Cambridge, *Upper Second Class (Hons)*

RESEARCH

Postdoc **Digital Reticular Chemistry, (2026–)**

Postdoctoral Researcher in the Computational Modelling (CoMo) Group, Department of Chemical Engineering and Biotechnology at the University of Cambridge. Working in the group of Prof. Markus Kraft on the discovery and optimization of metal organic polyhedra materials for carbon capture, drug delivery and photocatalysis applications.

Postdoc **Computational modelling of Li-ion battery cathodes, (2023–2025)**

Postdoctoral Research Fellow in the Materials Modelling Laboratory (MML), Department of Materials at the University of Oxford. Working in the group of Prof. Saiful Islam on the computational modelling of next-generation Li-ion battery cathode materials. Member of the CATMAT collaboration of the Faraday Institution.

Postdoc **Low-temperature excitations in glasses, (2020–2023)**

Postdoctoral Research Fellow in the group on Disordered Systems and applications (Francesco Zamponi) at Laboratoire de Physique de l'École normale supérieure *(ENS, Paris)*

Working on numerical models of tunneling two-level systems in glasses as part of the ERC project "GlassUniversality" and as a member of the Simons Collaboration on "Cracking the Glass Problem".

Postdoc **Atomistic simulations of materials for quantum-dot LED and smart textile applications, (2018–2020)**

Research Assistant in the Nanoscience and Technology Group (Prof. Jong Min Kim) at the Centre for Advanced Photonics and Electronics *(University of Cambridge)*

Modelling semiconductor alloys for quantum dot light emitting diodes (QDLED). As part of our multidisciplinary team (ERC project 1D-Neon) I worked on the challenges of fiber-based electronic devices from materials to integrated smart textile systems.

PhD **First and second principles simulations of Ge-Sb-Te phase-change memory materials**

with Prof. Stephen R. Elliott and Prof. Gábor Csányi *(University of Cambridge)*

Monte-Carlo sampling techniques for the fitting of a transferable Ge-Sb-Te machine-learned interatomic potential. Structure searching and prediction of novel compositions for phase-change memory and thermoelectric materials. Non-equilibrium molecular dynamics and stochastic-boundary conditions methods for calculating thermal conductivity.

MSci ***Ab-inito* Molecular Dynamics of Phase Change Materials - NAND gate simulation**

with Dr. James Dixon and Prof. Stephen R. Elliott *(University of Cambridge)*

Worked on the *ab-initio* molecular-dynamics simulations of the atomistic effects of thermal pulse programming in the $Ge_2Sb_2Te_5$ phase-change memory material for applications in-memory logic and neuromorphic ("brain-like") computation.

UG **Synthesis and characterisation of functional curcubituril-azobenzene host-guest assemblies**

summer student with Dr. Jesús del Barrio Lasheras and Prof. Oren Scherman *(University of Cambridge)*

INTERNSHIPS

2012 **Rotatives Engineering Intern**

Cambridge Materials Placements for Undergraduates in Summer (CaMPUS) from the University of Camb ridge Materials Science Department with Dr.-Ing. Hartmut Schlums *(Rolls-Royce Deutschland)* studying turbine blade lifetime in jet engines.

2018 **PhD Intern**

Center for Doctoral Training in Computational Methods for Materials Science Internship at Dassault Systémes, Cambridge, United Kingdom - with Dr. Felix Hanke, making workflows for estimating ionic transport of Li ions in commercial liquid electrolytes.

TEACHING

2016–2018 Organiser of fortnightly simulation tutorials *(Chemical Physics Group)*.

2017 Demonstrating Part IB Computational Practicals *(Department of Chemistry)*.

2016 Demonstrating Part IA Labs *(Department of Chemistry)*.

2016– Supervisor of Part II Theoretical Techniques course in Chemistry (Churchill College).

2015 Demonstrator IA C++ Computer Practicals (Engineering Laboratory).

2014–2016 Organiser of simulation sub-group meetings *(Chemical Physics Group)*.

SIMULATION AND COMPUTING

DFT	**VASP**, CP2K, CASTEP, GPAW	MD	**LAMMPS**, QUIP
Packages	**ASE**, quippy, pymatgen	MLIP	**MACE**, CHGNet, GAP
Languages	**Python**, Julia, Fortran, C++	Platforms	**Linux**

System administrator for the Elliott group *Hathor* computer cluster.

Tier-2 Resource Allocation (Project T2-CS020 “Thermoelectric Properties of Disordered Materials”): awarded 4 million CPU hours on the CSD3 supercomputer with Yuchen Hu and Prof. Stephen R. Elliott.

Tier-2 Resource Allocation (Project T2-CS073 “First-principles simulations of nanocrystal early-stage growth and morphology”): awarded 3.5 million CPU hours and 25,000 GPU hours on the CSD3 supercomputer with Prof. Jong Min Kim.

MesoPSL resource allocation: awarded 500,000 CPU hours on the MesoPSL supercomputer with Dr. Francesco Zamponi at ENS.

Grand-challenge proposal “Understanding ion migration and stacking transitions in Li-rich layered cathode materials for high-energy-density batteries”: awarded 14 million CPU hours on the Archer2 UK National Supercomputer

PUBLICATIONS

Status: submitted, preprint, published.

25. Schirmacher, W., Paoluzzi, M., **Mocanu, Felix C.**, Khomenko, D., Szamel, G., Zamponi, F. & Ruocco, G. Further testing the validity of generalized heterogeneous-elasticity theory for low-frequency excitations in structural glasses. *Physical Review E* **113,** 065406 (June 2026).

CONFERENCE PRESENTATIONS

Faraday Institution Conference

2024 *Voltage fade in $Na_x[Li_{0.2}Mn_{0.8}]O_2$ an oxygen-redox cathode material*, Poster Presentation, University of Newcastle, United Kingdom

XVI International Workshop on Complex Systems

2023 *On the microscopic nature of two-level systems in glasses*, Contributed Talk, Andalo, Italy - Prize for the best talk by an early-career researcher

Physics of non-crystalline solids

2022 *A heart of glass - low-energy excitations in a fragile glass model*, Contributed Talk, University of Kent, United Kingdom

International Symposium on Doped Amorphous Chalcogenides and Devices

2018 *Computer simulations of phase-change materials*, Poster Presentation, Grasmere, United Kingdom - Runner-up Poster Prize

European Phase-Change and Ovonics Symposium

2017 *A machine-learned interatomic potential for Ge−Sb−Te phase-change materials*, Poster Presentation, RWTH Aachen, Germany

Psi-k Conference on Electronic Structure

2015 *A Gaussian Approximation Potential (GAP) for the $Ge_2Sb_2Te_5$ phase change material*, Poster Presentation, San Sebastián, Spain

REFEREES

Prof. Saiful Islam, University of Oxford; saiful.islam@materials.ox.ac.uk

Dr. Francesco Zamponi, École Normale Supérieure Paris; francesco.zamponi@phys.ens.fr

Dr. Bo Hou, University of Cardiff; HouB6@cardiff.ac.uk

Prof. Stephen R. Elliott, University of Cambridge; sre1@cam.ac.uk

Prof Gábor Csányi, University of Cambridge; gc121@cam.ac.uk
